Learning Portfolio Milestone 1

Identify the portfolio platform you have selected

The portfolio platform I am using is WordPress which is a website that helps to make websites and makes the process easy. I have opened WordPress and made a base for the portfolio assignment.

Identify the method you are using to gather course assignments

I kept all the documents that I have submitted in a OneDrive folder which I labelled as IST110 and named the documents accordingly. The discussions are accessed through Canvas. I can then easily find and access these documents.

Provide an outline of the portfolio sections you have chosen

Home Page / Introduction
This page will have a brief introduction about myself and the course, along with the reasons for taking this course.

Projects Highlights
This page will be a compilation of the projects that I felt was most impressive and that have taught me the most.

Assignments
This page will have all the assignments throughout the semester and provide reflections on every single one of them. The assignments will either just be a snippet of the solution or the prompt (have not thoroughly decided yet). I will talk about what I learned through the assignments as well.

Discussions
I will highlight my favourite discussions here and a reflection on some of the discussions that have been done throughout the semester. I think it is interesting to see elaborate perspectives from different people and I will also explain that in this section.

Group Activities
I will elaborate regarding the group activites here and what benefits I have gotten from these activities. I will also explain regarding the challenges and the conveniences that I have faced in group activities.
